

INTRODUCTION

Most people think confidence comes first. They think action follows once fear disappears. That is backwards.

Confidence is usually the result of surviving pressure, not avoiding it. Every time you escape discomfort, your mind learns that pressure controls you. Every time you stay inside discomfort without collapsing, your mind learns that pressure can be handled.

This worksheet is designed to train that response directly.

The FORGED process is not about chasing intensity or forcing suffering. It is about building proof. Small controlled discomfort teaches your nervous system that resistance is survivable. Repeated exposure turns hesitation into stability.

Do not rush your answers. The value of this worksheet comes from honesty and specificity. Vague answers protect your ego. Precise answers expose the real friction holding you back.

Move through one letter at a time.

F — FACE

Purpose

This section forces you to identify the exact discomfort you usually avoid. Most people stay stuck because they describe problems in broad emotional language instead of concrete actions.

You are not identifying a personality flaw. You are identifying one repeatable moment of avoidance.

Your goal is to name a challenge that creates controlled pressure without causing harm.

How to Fill It Out

Write down one discomfort you will intentionally face this week.

Choose something:

- Safe
- Repeatable
- Specific
- Slightly uncomfortable
- Possible to complete daily

Then explain why it creates resistance inside you.

The goal is not to sound impressive. The goal is accuracy.

Weak Answers to Avoid

- "Be better socially."
- "Fix my life."
- "Stop being lazy."
- "Become confident."
- "Work harder."

These are too vague. Your brain cannot act on abstraction.

Strong Answers That Work

- "Start one conversation at the gym every day."
- "Take a cold shower for two minutes."
- "Post one piece of work online."
- "Study for 30 minutes before checking my phone."
- "Make one difficult sales call daily."

These create measurable exposure to discomfort.

Ask Yourself

- What challenge do I consistently avoid?
 - What excuse do I repeat most often?
 - What small discomfort would create the biggest shift if repeated daily?
-

O — OBEY

Purpose

This section teaches you to act before negotiation begins.

Most failure happens after the internal debate starts. Once emotion enters the decision, discipline weakens. Rules remove negotiation.

You are creating a standard that stays active whether you feel motivated or not.

How to Fill It Out

Write a direct rule for your behavior.

Your rule should:

- Be measurable
- Be simple
- Leave little room for interpretation
- Be possible to repeat daily

The rule must describe action, not emotion.

Weak Answers to Avoid

- "Try harder."
- "Stay positive."
- "Do my best."
- "Push myself more."

These fail because they depend on mood.

Strong Answers That Work

- "I will complete this before 9 AM."
- "I will do this daily without skipping."
- "I will act before checking my phone."
- "I will finish the task even if I feel resistance."

These create structure instead of hope.

Ask Yourself

- What usually causes me to quit?
 - What condition do I wait for before acting?
 - What clear rule removes that hesitation?
-

R — REPEAT

Purpose

One hard action means very little. Repetition changes identity.

Your brain trusts patterns more than intentions. The moment you repeat discomfort consistently, you begin proving to yourself that resistance no longer controls your behavior.

This section builds visible evidence.

How to Fill It Out

Track each completed day honestly.

Do not mark circles early. Do not protect your pride. The worksheet only works if the tracking reflects reality.

A broken streak is information, not catastrophe. Study it.

Weak Approaches to Avoid

- Skipping difficult days
- Tracking based on intention instead of completion

- Changing the rules halfway through
 - Making excuses for inconsistency
-

Strong Approaches That Work

- Mark completion immediately after action
 - Keep the challenge identical each day
 - Finish the task even if performance feels weak
 - Focus on consistency over intensity
-

Ask Yourself

- What time of day gives me the best chance of success?
 - What pattern usually breaks my consistency?
 - What environment helps me complete the task faster?
-

G — GRIND

Purpose

Discomfort usually peaks right before action begins.

This section trains you to stay present when resistance rises instead of escaping immediately. Most people quit during anticipation, not during the task itself.

You are identifying your escape patterns before they happen.

How to Fill It Out

Write down:

1. What will tempt you to avoid the challenge
2. What response you will use when resistance appears

Be brutally honest here. Predict your own excuses before they arrive.

Weak Answers to Avoid

- "I just need motivation."
- "I will force myself."
- "I will try not to quit."

These are emotional reactions, not strategies.

Strong Answers That Work

- "I will want to delay because I feel tired."
- "I will count backward from five and begin immediately."
- "I will want comfort after work."
- "I will change clothes and start before sitting down."

These interrupt avoidance patterns directly.

Ask Yourself

- What excuse appears most often?
 - What emotion usually stops me?
 - What action helps me move before hesitation grows?
-

E — EXAMINE

Purpose

Excuses lose power when exposed clearly.

Most internal stories survive because they remain vague and emotional. Once written down directly, many excuses become obviously weak.

This section separates emotional reactions from observable truth.

How to Fill It Out

Write the excuse you expect to hear in your mind.

Then write the proof you want to create by acting anyway.

The proof must come from behavior, not self-talk.

Weak Answers to Avoid

- "I want to feel stronger."
- "I want confidence."
- "I want people to respect me."

These are emotional outcomes, not evidence.

Strong Answers That Work

- "I can act even when uncomfortable."
- "I finish what I start."
- "Discomfort no longer stops me."
- "My actions are becoming consistent."

These are identity statements supported by behavior.

Ask Yourself

- What story do I repeat when avoiding pressure?
 - What evidence would directly contradict that story?
 - What action would prove growth instead of merely describing it?
-

D — DOMINATE

Purpose

This section closes the loop.

Growth only matters if it changes your self-perception. Reflection converts repeated action into identity.

You are documenting evidence that pressure no longer controls you the same way it did before.

How to Fill It Out

At the end of the week:

- Write what changed
- Write what became easier
- Write what resistance still remains
- Choose the next challenge immediately

Do not wait until you “feel ready” for the next step.

Weak Reflections to Avoid

- “It was fine.”
- “I survived.”
- “Nothing changed.”
- “Maybe I’ll keep going.”

These avoid responsibility and observation.

Strong Reflections That Work

- “The task became easier after Day 3.”
- “My fear was strongest before starting.”
- “I noticed I delay when tired.”
- “I proved I can stay consistent under pressure.”

These create awareness and direction.

Ask Yourself

- What did this week reveal about me?
 - What resistance lost power?
 - What challenge should become my next training ground?
-

FINAL INSTRUCTION

Do not treat this worksheet like inspiration.

Treat it like evidence collection.

Every completed section exposes either a weakness that controls you or a behavior that strengthens you. The goal is not comfort. The goal is proof that you can function under pressure without retreating into excuses.

Fill it out honestly or the worksheet becomes decoration.
